

Picture your typical service center bay. Some are cleaner than others, but even the cleanest, most organized service centers generally have tools – even expensive specialty tools – that are stored like this...

If this looks familiar, is it ANY wonder that your service technicians can't find what they need quickly and efficiently? Not to mention that you have no real idea whether the tool is even in the service center to begin with.
It's Time for ALL of that to Change!

By adding SupplyPro's specialty tool management systems service managers can:

- Provide secure housing for a diverse set of specialty tools
- Gain accountability for expensive, easily misplaced assets
- Increase tech productivity and service efficiency by reducing the amount of time spent searching for tools

Program Goals

- Absolute control of the most commonly used specialty tools
- Increase service department profitability
- Improve customer satisfaction
- Improve overall service tech productivity

Specialty Tool Management System for Automotive Service Centers

It's time to move away from using a peg-board or open drawer system that leaves hundreds of tools without any control or accountability.

SupplyPro has created a basic configuration that can put **immediate control** around your most frequently used and most expensive tools. Using a combination of the SmartDrawer, SupplyLocker and SupplyLink, you will have control over 122 most commonly used specialty tools; always knowing who has them, when they should be returned and automatic notification for any tools that are not returned as scheduled.

Basic Specialty Tool Package

- (1) Stanley-Vidmar or Rousseau Cabinet
