The SBD works in conjunction with the SupplyPort, SupplyPro's exclusive web-based portal that stores and organizes transaction data, keeping high value items safe and accessible to users.

## How the SBD Works

- Items are loaded into individual SBD cassettes
- A user logs into the SupplyLink and selects an item
- The drawer light flashes and the cartridge with the selected item also flashes and unlocks
- The user simply lifts the box and removes the item automatically creating a recorded transaction
- Management has visibility to who is using the item, how many were used, and, if needed, that an item order needs to be placed to replenish stock
- Reports and alerts are sent based upon client-established business rules
