

Calibration Management

Proven Point-of-Use Solutions for Calibration Management

CONTROL ASSETS THAT NEED CERTIFICATION OR INSPECTION

Instruments that require calibration, or tools needing regular inspections, require greater control and effort to properly manage. If you're tired of manually tracking this activity in spreadsheets then let the SupplyPro system automatically manage them based on your normal business rules.

Don't let another tool into production without proper inspections and know every person and job a tool was used on!

Standard programmable features include:

- **Audit trails with standard reports**
- **Automatic lock down of non-reusable tools**
- **Automatic email alerts on lock down or overdue status**
- **Loan Periods**
- **Visibility at the machine to who has tools checked out if none are available**
- **Access rights to tools & assets per user**
- **Forced Return feature**

Take Asset Management to the NEXT LEVEL with Serialization

Calibration & Serialization Features

With SupplyPro, extensive business rules and reports are available for tools and assets that are defined as serialized items. For example, you have five micrometers. They all have the same part number but each micrometer can also have an individual serial number with specific rules applicable only to that tool.

Additional features for serialized items include:

- **Automatically “age” and lock down tools by either number of uses, number of days, due date – or any combination thereof**
- **Automated alert notification when a warranty date is reached**
- **Users can lock-down assets that are not reusable with notification sent to management for repair**
- **Dedicated compartment for serial item check in**
- **A full audit history by asset and user**

*Features also apply to SupplyLocker

Avoid Costly Penalties from Spot Inspections

SupplyPro customers can avoid penalties for tools being used in production that are out of certification. In the case of an FAA spot inspection, the manufacturer can be fined as much as \$10,000 PER TOOL if tools are in production but are out of certification. SupplyPro ensures lock-down and notification of certification expirations for swift compliance that's always up-to-date.

Serialization Setup Options

Standard reports and alerts designed for asset management are available to authorized individuals from any web-enabled device as well as through the Automated Report Scheduler from the SupplyPort.

Specific reports designed to manage asset applications:

- **Check Out Report** – see who has all currently checked out products from any or all devices
- **Lockdown Report** – shows all tools currently in stock but locked down either due to an aging condition reached or user initiation
- **Serial Number History Report** – immediately retrieve a full history for auditing by user, stock location, job, etc.
- **Calibration Due Report** – identify items within certain days of reaching the defined aging rule
- **And many more!**

Product Name	TORQUE WRENCH 1/4 DR, 40-200 IN/LB
Part Number	TW-40-200
Serial Number	<input type="text"/>
Location	NOT LOADED
Condition	NEW
Last Calibration Date	February 5 2010
Number of uses since last calibration	0
Date of first use since last calibration	
Item Location	
Expires?	Yes <input type="radio"/> No <input checked="" type="radio"/> Select Yes to monitor a warranty or material expiration date for this serial number.
Expiration Date or Warranty Expiration:	February 5 2011
Send Notice of Expiration:	Send Email <input type="text"/> day(s) before expiration date.
Email Address:	<input type="text"/>
Send Email on Checkout?	<input type="checkbox"/>

Product Name	TORQUE WRENCH 1/4 DR, 40-200 IN/LB	
Part #	TW-40-200	
Stock #	1020	
Serial #	1030	
	Customize	Product Defaults
Calibration Type	<input type="text"/>	CALIBRATION
Use Tool Rotation	<input type="checkbox"/>	No
Hold Period	<input type="text"/> Days	x Days
<input type="checkbox"/> Calibrate after	<input type="text"/> uses	10 uses
<input type="checkbox"/> Calibrate	<input type="text"/> days after first dispense	x days after first dispense
<input type="checkbox"/> Calibrate	<input type="text"/> days after last calibration	x days after last calibration
Use calibration due date	<input type="checkbox"/>	No
Use Item Custom Calibration?	<input type="radio"/> Yes <input checked="" type="radio"/> No	

Above illustrates the custom business rules available PER SERIAL number – if more than one option is selected – whichever happens first will automatically lock the tool down and an email notice can be sent to appropriate quality personnel.

Typical Serialized Tools Managed by SupplyPro

- Micrometers
- Torque wrenches
- Electronic test equipment
- ANY tool where you need to report actual usage at the user or job level

- Secure transaction capture in the event of an Internet failure using "store forward" technology
- Items selected in error can be easily returned
- Servers hosted by AT&T at their regional operations center
- Plug and Go technology!

SupplyPro - Simplicity that Delivers

SupplyPro, Inc. is the premier provider of Point-of-Use (POU) inventory management solutions with over 5,000 installations in 39 countries. Our solutions bring proven simplification to the distribution and management of MROP, safety and tooling supplies at the work cell. Easily adaptable to customers' business environments to deliver the industry's highest return on investment. Industry-leading capability to interface to existing ERP and supply chain systems. **For more information, visit www.supplypro.com, email info@supplypro.com or call 1.858.587.6502 or 1.513.671.4933 x. 107.**
