

Virtual Inventory Module (VIM)

Transaction Tracking Outside the Device

VIM Facts:

- VIM is a special module for SupplyPro customers with SupplyLink
- All standard SupplyPort reporting, ordering, business rules, permissions, and product characteristics apply
- SupplyLink's "Find Elsewhere" feature can be used to maximize VIM visibility
- VIM storage locations can be assigned by the system or custom named by the administrator

SupplyPro Virtual Inventory Module (VIM)

Like the convenience of SupplyPro tracking your materials but still have several items too large to put in a device? No problem with the SupplyPro Virtual Inventory Module (VIM). VIM allows clients with SupplyLinks to track transactions for products not physically within a SupplyPro device. With proper user participation, items are easily tracked with full SupplyPort reporting capabilities and business rules.

How It Works:

- Materials are "loaded" into the VIM location for selection by users
- User logs into SupplyLink and chooses an item
- SupplyLink screen then shows users where the item is stored (rack, bin, shelf, closet, etc)
- Transaction is recorded in SupplyPort
- All transactions are available in reports from SupplyPort
- All standard ordering rules and inventory alerts can apply to items loaded in VIM

Typical VIM Items Include:

- Compressors
- Motors
- Fans
- Ladders
- Drums
- Wheels
- Forklifts
- And much more!

Fail Safe Technology

- Secure transaction capture in the event of an Internet failure using "store forward" technology
- Items selected in error can be easily returned
- Servers hosted by AT&T at their regional operations center

SupplyPro - Simplicity that Delivers

SupplyPro, Inc. is the premier provider of Point-of-Use (POU) inventory management solutions with over 4,500 installations in 39 countries. Our solutions bring proven simplification to the distribution and management of MROP, safety and tooling supplies at the work cell.
