SUPPLYPRO ®

SAN DIEGO – SupplyPro, Inc. now offers pre-configured SupplyScale solutions, making it easier and more affordable for manufacturers to increase the number of items dispensed through point-of-use inventory management solutions. SupplyScale's pre-configured options mean faster delivery and a lower price that gives customers increased control and accuracy without increased expense.

SupplyScale uses industry leading weight-based sensing technology and SecureBin™, a patented managed locking bin system, with easy to use pick-to-light functionality on every drawer and bin location. SupplyScale quickly and accurately calculates the number of items taken, returned, or restocked based on their weight, with no repackaging or tagging of items needed. Offering 6- and 7-drawer models, customers can still specify 4-, 8-, 16-, and 24-bin covers for each drawer.

"With SupplyScale, distributors love it because restocking is as easy as emptying a box of items in to a bin. It's accurate, saves time, and eliminates inaccurate hand counting," said Stan Sigman, CRO of SupplyPro. "End users love it because they can grab and go with the materials they need," Sigman added.

SupplyPro, Inc.

www.supplypro.com

SupplyPro designs inventory management solutions that bring accountability and control to distributed inventories around the globe. SupplyPro systems control millions of items valued in the billions of dollars annually. The company is a pioneer in scalable web-based solutions including software, hardware, enterprise-class data management and analytics. Working with world-class distributors, SupplyPro delivers 24/7 access to crucial and/or frequently used materials and tools, reducing cost,

managing access and control, providing actionable insight, and improving supply chain visibility.

Founded in 1995, SupplyPro is headquartered in San Diego, with an additional Training Center located in Cincinnati, OH.
