SupplyMobile

SupplyPro® inventory management software goes mobile with the addition of our Android™ based solution—seamlessly integrated into the SupplySystem® inventory management platform.

SupplyMobile can be used on its own or in conjunction with any SupplyPro inventory management device. It allows anyone with Android based products to track transactions for items not physically within a SupplyPro device. Inventory is managed and easily tracked with full SupplySystem software reporting capabilities and business rules.

SUPPLYMOBILE DELIVERS

Outstanding Value

• Reduce operating cost

• Increase productivity

• Optimize inventory levels

Improved Accountability

• Fully integrated with SupplyPro systems and devices

• Multiple devices can be used together to manage larger storerooms or warehouses

• Automated monitoring of your inventory levels to generate orders based on your criteria with electronic transfer of purchase orders to suppliers

Flexible Design

• Most key product characteristics and features available as if item is managed in a machine

• Continue working if network coverage is lost, system automatically synchronizes when signal is re-established

• Multiple screen size support

TYPICAL USAGE

• Crib or storeroom management

• Stocking management for route drivers

• Non-stock or ad hoc ordering

• Warehouse management

The SupplyMobile App works great on the OBCS-D5000 Scanner, sold separately. Ask your SupplyPro Sales Representative for details.
